*Balanced Cattle Genetics Emphasizing Calving Ease, Reduced Maintenance Energy,
and Enhanced Stayability; Selected For Gentle Disposition*

A LITTLE ABOUT US

Our Philosophy...

We recognize that there is no “one size fits all” when it comes to seedstock. Because of this, we believe it is very important that you understand the approaches we take in our breeding program. We believe the cattle we have available for sale will work very well for many – but certainly not for all. We don’t want to simply make a sale – we want satisfied customers. It is for this reason that in the following pages, we have tried to do more than just describe the animals we have in this year’s offering.

Our Focus...

We began our purebred Red Angus herd in 1999 with the purchase of a bull and heifer. It is from that nucleus that our herd has been developed. We purchased some cows thereafter, but have maintained a closed cowherd since 2002.

Our initial focus was developing sound cattle capable of surviving and thriving on the often limited inputs available on the High Plains. Selection pressure was applied to produce cattle with calving ease, low birth weight, and high longevity in the herd – meaning an EPD emphasis favoring high CED, low BW, and high STAY. Although not an early focus of our herd bull selections, we have also long applied pressure on maintenance energy, preferring a low ME EPD. The latter is simply a reflection of the environment in which our cattle live, and conditions to which we subject our cows. For winter rations, our cows forage stock-piled grass until mid-February, and are only fed supplemental hay from that point through calving. (In very rare instances of ice or extremely heavy snowfall, we do feed hay for brief periods before mid-February; however, those precipitation events are not common in our part of the country.) Since 2009, we have also applied selection pressure on the HPG and CEM EPDs, the results of which are now starting to become apparent.

We have emphasized these EPDs because we want a cow that will calve unassisted, forage for a significant portion of her nutritional needs, yet breed back to produce fertile progeny. In the process, we don’t overlook the other genetic traits, but we won’t pursue a high YW EPD, for example, if it were to come at the expense of any of our main areas of focus.

But there is no EPD for the most important trait for which we have selected – disposition. It is no understatement that we have been very meticulous in culling any cows which display aggression. Anyone who has had to weigh a newborn calf with the momma cow in one’s hip pocket will fully appreciate this sentiment. We have also found that quiet cows are just better for any scenario – whether it’s working them, loading them, or simply moving among them. University studies back us up on this. Flighty calves don’t gain as well in the feedlot.

We believe the selection criteria we employ will produce cattle that can survive and thrive on limited inputs.

**ALL CATTLE SELLING
ARE 100% RED ANGUS.**

Annual Production Sale

First Thursday of April

April 6, 2017

12 o'clock noon CDT

WaKeeney Livestock, LLC

WaKeeney, Kansas

Welcome to the 3rd Annual Giefer Production Auction!

March 2017 has reminded us of all the challenges that face hard-working ranch families with many hardships beyond our control. As I write this letter, fires and strong winds are causing disasters in the panhandle of Oklahoma, Texas and parts of Kansas and threaten not only livestock but people as well. Our thoughts go out to all ranchers who have experienced losses and particularly those who have lost family members or friends. Ranching is a tough way of life and definitely requires a "special breed" to endeavor.

Without question, the Giefer operation is a true family enterprise with everyone pitching in to make the daily routine work and get the jobs done. The focus in their Red Angus operation centers around the production of high efficiency bulls with calving ease and little outside inputs. While this auction is not a "big sale", the offering allows you plenty of opportunity to select bulls and heifers that can improve your operation's efficiency, calving ease and improve profits. The Giefers pride themselves in not just selling cattle but making satisfied customers. The bulls are represented as Lots 1-31 and the five heifer calves sell as Lots 32-36. If you desire cattle with low input costs, you cannot afford to miss the Giefer Red Angus offering on April 6th.

The horse program at Giefers is managed by Nishi with a lot of help from the girls and offers 6 yearlings and one 3-year-old broke gelding. The horses are gentle and bred for ranch work and most are beautiful palominos and buckskins. If you like to develop your own mount, these young horses should not be missed.

It is a pleasure to be associated with hard working ranch families and the Giefer Production Sale is always an opportunity to see an "all hands on deck" approach to a family operation. You can get a detailed answer about any of the cattle or horses from any member of the Giefer clan because they are involved every day.

If you need any assistance with purchases, don't hesitate to call me at 641/919-1077. If you cannot attend the auction, please tune in via DV Auction and bid online.

I look forward to seeing you in WaKeeney, Kansas on April 6th!

Best Regards,

Kyle Gilchrist

Note...EPDs listed with each lot are current as of catalog printing.

Our Cows...

Every cow and heifer in our herd has been raised on our ranch. The cowherd has been closed since 2002.

Our cows are bred to calve starting May 1, when pasture (generally) begins the summer growing season. We inevitably have early calvers, so for all practical purposes our cows begin calving around April 20. There are several reasons for selecting this time of year. First, daylight lasts longer to facilitate checking cattle. Second, the weather is usually kinder for weighing and tagging newborns. Third, by calving on clean grass, we virtually eliminate the prospect of calf scours. Finally, our grasses are at greatest production in mid-June—six weeks after calving. That is key because it is then that the cow is at peak lactation and resumes her estrous cycle to re-breed. In other words, she is at the highest nutritional demand of her year, and we try to pair that with the most optimal nutritional inputs.

As our cows calve, they are transported with their calves to what will be the cows' breeding pastures. We maintain separate breeding pastures for each of our herd bulls. We turn our bulls out July 18 – no exceptions; the day is eagerly anticipated, much like a holiday! We retrieve our bulls August 29, which results in a 42 day exposure for each cow. In 2016, we began an artificial insemination program for heifers.

We generally strive to wean our calves in mid-September to early October. At the time of weaning, our calves are fairly young – some just older than 100 days. We practice fence line weaning. It is at weaning that the cows are weighed, assessed a body condition score, hip height measured, dewormed, boosted (with clostridials “blackleg” and virals [BVD, BRSV, PI3, IBR], vibrio, and lepto), and pregnancy checked.

About a week after weaning (as the cows begin to accept that they have been separated from their calves), we transport the cows to another part of the ranch, where they forage until late November or early December. Our cows are then moved to their winter pasture, where stockpiled pasture awaits, and where they stay until just prior to calving season. Except in the rare instance of ice or very heavy snowfall, we avoid forage supplementation until mid-February, and we regularly evaluate the cows' body condition scores. Over the years we have aggressively culled cows that did not appropriately maintain body weight during the winter, the result of which is a cow herd which is well suited for a winter of limited inputs.

During calving season, cows receive supplemental hay as mandated.

Our Calves...

As calves are born, they are transported with their dams to the particular pasture which will serve as the dam's breeding pasture for the subsequent breeding season. The calves will stay with their dams until early to mid-September when all pairs are collected and transported to a common pasture. The calves are pre-conditioned (vaccinated for clostridial diseases “blackleg”, viral diseases [BVD, IBR, BRSV, PI3], vibrio, and lepto) and branded. Heifers receive official calfhood vaccination (brucellosis), and bulls get their first round of footrot and pinkeye vaccine. At weaning three weeks later, the calves are weighed and given vaccination boosters. We practice fence line weaning, and it is then that calves are introduced to a ration of grain and free choice oat hay.

TO SHAVE OR NOT TO SHAVE – IS IT REALLY A QUESTION?

Early April on the High Plains can still witness old-man winter trying hard to maintain his wintery grasp. If sale date is like many early-Aprils past, attendants will be bundled appropriately to keep the chill out and the warmth in. The same will hold true for our animals.

We are in the business of producing the very best animals we can. Our breeding decisions are based on genetic potential. On sale day you will see our animals clean and well groomed – but not shaved, and certainly not torched! We are selling genetics – not a hair do! There is a reason animals have a hair coat, and the animals we sell will still wear it.

With our animals, hair coat is included – no additional charge!

OUR COMING 2-YEAR-OLD BULLS...

Some Background...

Our bull calves are separated from their sisters at about 7 months of age. They are then mingled with their year-older brothers and released into a sizeable trap where they have room to roam and exercise. The bulls are wintered on a ration of grain and free choice hay.

After their year-older brothers are sold in the spring, the now-yearling bulls are weighed, receive vaccination boosters, and are thoroughly evaluated for soundness. Abnormalities are culled. The bulls spend summer on pasture and/or drylot, as conditions warrant. The bulls are returned to the trap in the fall, where they overwinter as the year before, except now they are “big brothers.”

We don't push our bulls hard. Because our cows calve in May, the bulls, as yearlings, would be too young to sell in a spring sale as coming yearlings. Further, studies we have reviewed suggest that raising bulls on a moderate nutritional plane may increase their breeding lifetime because of two important results: (1) they don't “outgrow” their feet and legs in their developmental stage, and (2) they deposit less scrotal fat, which appears to contribute to improved semen production.

All coming 2-year-old bulls we offer for sale are virgins.

Veterinary Procedures...

September 2015: pre-conditioned with the following vaccines: clostridials (“blackleg”), virals (BVD, BRSV, PI3, IBR), leptospirosis, vibrio, pinkeye, footrot

October 2015: weighed, separated from dams, boosted vaccinations, dewormed with ivermectin

February 2016: dewormed with ivermectin, weighed

January 2017: injected with vitamin A, dewormed with ivermectin, weighed

March 2017: examined for breeding soundness, boosted vaccinations, dewormed with ivermectin, measured hip height, weighed

December 2016: dewormed with ivermectin, weighed

Trichomoniasis Testing...

The Kansas Department of Agriculture's Division of Animal Health has approved Giefer Ranch's Trichomoniasis Herd Management Plan. To gain this certification, we submitted information regarding our fences, herd movements, individual identification, and the virgin status of our sale bulls (we do not lease any bulls). By granting this status, the State allows us to market and ship (within Kansas) any bulls under 24 months of age without testing for Trichomoniasis.

Trichomoniasis is a sexually transmitted cattle disease that causes early term abortion in cows. These abortions occur early enough in pregnancy that the fetus is generally resorbed rather than expelled, so the dead fetus will not likely be found. The cow may become pregnant again later in the breeding season. Often the first sign of infection in the herd is a large number of late and open cows at preg-checking time.

Though the cow can clear the infection, a bull cannot. The protozoa that cause trichomoniasis “hide” in the many folds inside the bull's penile sheath and are impossible to fully eliminate. The only “cure” for trichomoniasis in a bull is slaughter.

Testing a bull for trichomoniasis involves sampling the smegma found in the penile sheath. Conducting the test does incur some risk of damage to the sheath and penis. Because of this we have elected against routinely testing sale bulls. However, if you require a trichomoniasis test to ship outside Kansas, or if you are within Kansas and desire your bull purchase(s) tested, please allow us a couple weeks after the sale to complete the testing. We will test and board your bull(s) free of charge and will honor the day-of-sale pickup discount if you pick up your purchase(s) within two weeks of the sale.

Our Guarantee...

All bulls selling have passed a Breeding Soundness Examination within one month of sale. It is recommended that bulls be re-tested 4-6 weeks prior to breeding season. Bulls selling for \$4,000 or more are guaranteed through the first breeding season.

We strive to insure that all bulls we sell are sound breeders. However, as with any biological creature, deviations from expectations occur. We recognize that aberrations, although rare, are nonetheless part of the livestock industry. Therefore, we extend this breeding guarantee to purchasers of our bulls as a means of redressing those rare instances in which breeding expectations are not met.

1. All bulls sold are guaranteed to be breeders, with the exception of:
 - a. Bulls shown after sale by or with the permission of Buyer; in this instance, the breeding guarantee, if any, shall be as agreed upon between us and Buyer.
 - b. Negligence or willful misconduct on the part of Buyer. Any bull shall be considered a breeder if it: (1) Settles one-third or more of the healthy cows he serves; or (2) Is the sire of 20 or more calves; or (3) Settles cows by natural service and passes a fertility test made by a competent veterinarian during any six-month period of trial.
2. All claims for refund must be delivered by Buyer to us in writing prior to January 1, 2018.
3. In the event any bull is claimed to be a non-breeder, the bull must be returned to us in good condition and complying with Kansas health requirements. We shall be entitled to three (3) months trial following the return of the bull in which to prove the bull is a breeder. If at the end of three (3) months we are unable to prove the bull is a breeder, we shall refund to Buyer the purchase price, which shall be deemed full satisfaction and settlement. Any expenses incurred for transporting a bull claimed to be a non-breeder shall be the responsibility of Buyer. If we prove the bull to be a breeder, it shall be the obligation of Buyer to take delivery of the bull and pay all expenses incurred for transportation.

THIS IS A BREEDING GUARANTEE ONLY. THIS GUARANTEE DOES NOT EXTEND TO INJURY, ILLNESS, OR DEATH. INSURANCE FOR INJURY, ILLNESS, OR DEATH IS RECOMMENDED.

Please note this bull has a scar on his right eye. We decided to go ahead and offer him because of his superior Birth Weight EPD and calm disposition.

Please note the birthdates on these next two bulls. They are the result of an experiment to move some of our cows to a later calving date. They passed their Breeding Soundness Exams and are ready to go to work. Expect them to grow a lot!

OUR COMING YEARLING HEIFERS...

Some Background...

Our heifer calves are separated from their brothers at about 7 months of age. They remain in drylot and on a ration of grain and free choice oat hay until they are transported to their respective breeding pastures in early May.

As with our bulls, we don't push our heifers too hard, nutritionally speaking. Consistent with publically available studies, we have had success with heifers conceiving at 60% of their mature weight and then conceiving the following year (with calf by side) for their second calves.

Veterinary Procedures...

September 2016: preconditioned with the following vaccines: clostridials ("blackleg"), virals (BVD, BRSV, PI3, IBR), leptospirosis, vibrio, official calfhood vaccination (brucellosis)

October 2016: separated from dams, boosted vaccinations, dewormed with ivermectin, weighed

December 2016: dewormed with ivermectin, weighed

Our Guarantee...

Note that as of the sale date, these heifers are not yet a year old. Because they have not been pushed, they are not likely suitable for breeding until at least June. In our operation, we turn heifers out with bulls on July 18, and we have had excellent pregnancy rates. But cattle are a lot like financial investments: past results do not guarantee future performance.

THEREFORE, BECAUSE OF THE MANY ENVIRONMENTAL AND OPERATIONAL FACTORS WHICH BEAR ON HEIFER PREGNANCY – AND WHICH ARE BEYOND OUR CONTROL – THESE HEIFERS SELL AS IS, WHERE IS, WITH NO BREEDING GUARANTEE.

OUR HORSES...

Our goal in breeding horses is to produce an all-around ranch horse with good conformation and disposition. Another important goal is to help our kids gain experience.

Our stallion Zand Stone is a mild-mannered, easy-to-handle 15.2 hand perlino dun stallion with bloodlines from Two ID Bartender and Zan Parr Bar. He spends all year in the pasture: in summer he runs with the mares and foals, and in winter the entire remuda—riding horses as well as broodmares.

The pedigrees of our mares include Doc Bar, Poco Bueno, Peppy San Badger, Cutter Bill, and Two Eyed Jack.

Though we don't clip our cattle, we do own a set of clippers. All horses will be sold with a halter and a bridle path for it.

All horses (except Lot 42) sell with certificate of registry and transfer form. Costs of horse transfers are the responsibility of buyer. Lot 42 sells with registration application; registration will be responsibility of buyer.

Zand Stone

Veterinary Procedures...

Yearling Horses:

August 2016: Weaned, dewormed ivermectin

December 2016: Dewormed ivermectin

February 2017: Dewormed moxidectin

Firecracker:

Current on EEE, WEE, tetanus, and rabies vaccines

February 2017: dewormed with ivermectin

Sybil hanging around with Zand Stone.

Markings: Star, right hind coronet

Firecracker is easy to catch, halter, lead, groom (he loves having his mane and tail braided), load in the trailer, saddle, mount, and ride. He has had all four feet trimmed and has been shod in front, works from hand and leg cues, starting to neck rein, and accustomed to a rope though he hasn't been tied to any critters. Extremely gentle, he would probably like to come into the living room and watch television with you.

SALE TERMS AND CONDITIONS...

TERMS: Terms of the sale are cash, check, or other terms agreed to in writing between seller and buyer, payable immediately upon conclusion of the sale before animals will be moved. Seller reserves the right to require a certified check as settlement before releasing any livestock.

PURCHASER'S RISK: All animals are the owner's risk prior to their sale and become property of the purchaser as soon as declared sold by the auctioneer.

BIDDING: Any disputes or challenges regarding bids or tie bids will be settled by the auctioneer and his decision will be final.

CERTIFICATE OF REGISTRY: A certificate of registry for all cattle will be transferred to the buyer at the seller's expense. All horses (except the unregistered lot 42) sell with certificate of registry and transfer form. Costs of transfer are the responsibility of buyer.

ANNOUNCEMENTS: Any errors or changes in information contained in the catalog will be announced from the block and such announcements shall take precedence over the information contained herein.

HEALTH: All animals are eligible for interstate shipment. Interstate health papers prepared by an accredited veterinarian can be furnished on each animal sold. All efforts for the exportation of livestock can be arranged through the seller.

LIABILITIES: All persons who attend the sale do so at their own risk. The seller and auction facility assume no liability for an accidents that may occur. Neither does the seller or auction facility assume liability for the loss or injury to livestock due to theft, mysterious disappearance, sickness, improper handling, or Act of God. Any legal action that may in exceptional cases be taken must be between the buyer and the seller. This catalog has been prepared by the seller from pedigrees and information supplied by sources deemed reliable; however, the seller will in no way guarantee the pedigree, percentages of the animal selling, or data included in this catalog. Any exceptions taken are between the buyer and the seller.

CONTRACT: The above terms and conditions of sale shall constitute a contract between the buyer and seller of each animal and shall be equally binding upon both. Each sale or resale of an animal constitutes a separate transaction.

PHONE BIDS: Telephone bids will be taken by the auctioneer. Kyle Gilchrist's cell number is (641) 919-1077.

OUR TEAM...

While ranching is a huge part of our lives, we are not only about livestock, hay, and fencing. All four kids are runners, often covering several miles before breakfast. They also participate in other sports, music, and scholars bowl. Our oldest three are 2016 Kansas State Cross County medalists, and our youngest hopes to join them in 2017 his freshman year.

Year-round, in all kinds of weather, Windell Clark spends his Saturdays (and sometimes other days) keeping the mechanical plant functioning. He is also here on sale day along with Rick & Jeremiah Burbach, David Hille, Lisa Gilchrist, Marylin Schneider, Kendall Ottley, Sherry Kuntz and her staff, and Jan & Sandy Burkhard. The Burkhardts come all the way from Ohio to give us a hand before and during the sale and make deliveries afterward. THANK YOU ALL!

Nicholas P. Schroeder, DVM, MS, fondly known as Dr. Nick on our spread, is a retired veterinarian, Red Angus breeder, and good friend who helps us more than we know.

In summer, our crew includes "The Nephews" who come from Eastern Kansas, Wyoming, and Colorado to toil at Ranch Boot Camp. Thanks Evan, Collin, Carter, Taylor, and "adopted" nephew Dalton. No Sundays west of Omaha. Right, Boys?

Special thanks to the staff of WaKeeney Livestock, LLC, George Waldschmidt and owner Kyle Zimmerman.

Sale Day Helpers

OUR HERD SIRES...

Over the years, we have refined the genetics we look for in our herd bull selection. Our current herd bull battery consists of the following:

1. LCS Z 6 (known on our ranch as Joe Bull). Joe Bull was born on March 4, 2012.
2. Andras In Focus 1158 (known on our ranch as Kibble). Kibble was born on September 27, 2011.
3. Beckton Julian B139 J8 (known on our ranch as Laffy). Laffy was born March 4, 2014.
4. Giefer Orion B515 (known on our ranch as Mo Bull). Mo was born May 5, 2014.

All of our cows are bred by natural service (except we did begin artificial insemination of heifers in 2016) in segregated breeding pastures. Our herd bulls are released to their respective breeding herds on July 18 and retrieved August 29 (which produces a 42 day breeding season). The herd bulls are returned to the herd of pregnant cows in November or December, where they stay until shortly before calving season begins in late April.

A NOTE ON EPDs...

In 2014, two of our herd bulls sported EPDs (Expected Progeny Differences) much better than those the Red Angus Association of America (RAAA) reports as of the printing of this catalog. LCS Z6 had a HerdBuilder EPD of 188 which is now 112; a Calving Ease Maternal (CEM) EPD of 6 now 5; and a Stayability (STAY) EPD of 18 now 10. A more striking decline is noted with Andras in Focus: HerdBuilder of 177 now 89; CEM was 11 now 5, and STAY was 14 now 7. The prior EPDs were not accidents; they reflected the genetic pedigree and performance we actively sought, and for which we expended considerable sums in acquiring. However, as shown, these bulls' current EPDs paint a much different – and uglier – picture.

What changed?

Let's start from this perspective: the ancestry and genetics of the bulls are the same today as on the day they were born. If anything, we can now market the progeny of LCS Z6 and Andras in Focus with much more confidence because we have had the benefit of developing multiple years' worth of calves sired by these bulls. The performance of these calves – many of which are now in our cow herd – have re-confirmed the decisions we made in adding LCS Z6 and Andras in Focus to our bull battery.

The bulls' EPD "problem" appears to lie with the RAAA's inability to utilize ancestry and associated progeny information from black-hided animals who were registered with the Canadian Angus Association. (This is important because LCS Z6 and Andras in Focus each trace their bloodlines, in part, to Black Angus in the Canadian registry.) The reasons for this data gap – at least to the extent we've been informed – appear to depend on who one talks to. Whatever the reason, it is our opinion that the current EPDs are inaccurate. This continues to be a source of immense frustration for us and other breeders and, in our view, threatens to severely undermine the utility and integrity of EPDs. The claim by some that "it's being worked on" is of little assurance to those of us who have bought in – literally and figuratively – to the promise of EPDs and outcross genetics.

The bottom line is this: despite the EPD "problem," the progeny of the mentioned bulls are genetically no different now than they were before the "problem" arose.

So, genetically, nothing has really changed.

OUR LOCAL HISTORY...

The 1803 Louisiana Purchase, orchestrated by President Thomas Jefferson, merged into the United States the great expanse we now know as Western Kansas. In 1865, entrepreneurs seized an opportunity for trade with Denver City – on the western edge of what was then Kansas Territory – and established the Butterfield Overland Despatch (BOD) Trail. The BOD followed the Smoky Hill River to the Hackberry Creek (in modern-day Trego County), where Downer’s Station was built, and where the trail took a short deviation along the creek; an Indian raid later destroyed the station. Although the part of our ranch (affectionately called Dinosaur because of its many fossils) which includes the Smoky Hill River was bypassed by the route’s deviation, Castle Rock – a prominent landmark on the trail – can be seen in the background of some of our photos. And though the BOD didn’t cross our land, the WaKeeney-Dighton Stagecoach did – and (according to history) so did the famous George Armstrong Custer. Stagecoach ruts remain visible, and we have ridden horseback on the river bank where then-Lieutenant Custer and his cavalry troops trod.

Castle Rock in background

In 1877 business partners Albert Warren and James Keeney formed the Warren, Keeney & Co., and set about designing “The Queen City of the High Plains” – WaKeeney. The town was planned in a Chicago office, including the 80-foot wide streets for which we are grateful in this day of the automobile. Known today as “The Christmas City of the High Plains,” a 35-foot Christmas tree is decorated annually in the intersection of Main Street and Russell Avenue. Trego County – for which WaKeeney is the county seat – was organized in June of 1879, and named for Civil War Captain Edgar Poe Trego, of the 8th Kansas Division, who died in the 1863 Battle of Chickamauga.

The Kansas Pacific Railway reached WaKeeney in the 1870s. About a mile west of town, the crew building track came under Indian attack. History records that some of the crew fled northward and sought refuge under a cliff. Although the exact location is now unknown, we pasture the area, and our imagination is fueled as we ride by the cliffs and contemplate that these outcroppings – a serene scene for grazing cattle and horses, and even Christmas card photos – were once defensive positions for men engaged in the fight of their lives.

Area State historical sites include Old Fort Hays, Fort Wallace, and Cottonwood Ranch; National attractions are Ft. Larned and Nicodemus. Castle Rock and the Sternberg Museum (home to some of the aforementioned fossils) are also nearby. A little further northeast is the cabin where Dr. Brewster M. Higley in the early 1870s penned the words to a poem he titled “My Western Home” – which was set to music in 1947, and became the Kansas State Song we know as “Home on the Range.”

Oh, my – for those who travel this area and think it is just boring “flyover” country – what a rich history we have! This is why we are proud to call this Our Home on the Range of the Great American Plains!
